Subject Index for Volume 2 400

CONTEMPORARY EDUCATIONAL PSYCHOLOGY

INFORMATION FOR AUTHORS

Contemporary Educational Psychology publishes articles dealing with empirical research and theory in psychology as related to the educational process. Since the process of education is a lifelong one, materials reflect the several life phases from neonatal to senescence and death. However, these stages are reflected in an educational framework, and articles and reviews must show a clear relationship to topic, data, and theory.

Specifically, the Journal contains articles that demonstrate the application of psychological methods and skills to the educational process. Both classroom and laboratory experimentation are relevant, particularly as they emphasize problem-solving. Instructional techniques may be reported, if adequate controls are used to demonstrate the validity of the findings. Theoretical contributions may include issues, comparisons, analyses, and the like as appropriate content.

In addition to articles, each issue contains reviews of books. On occasion, reviews of projects and films related to the purpose of the Journal and of interest to the readership are also published. A research critique of a selected educational topic and conclusions about implications for the field is included in each issue. For instance, the topics selected for critique will reflect extensive research over a period of several years, so that consistency in findings and applications in the practical state may be explored.

The content of *Contemporary Educational Psychology* allows the identification of educational problems, both in and out of school, and relates the content of each issue to these problems.

Manuscripts for consideration should be submitted in triplicate to the Editor, Allen J. Edwards, *Contemporary Educational Psychology*, Route 2, Billings, Missouri 65610.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Contemporary Educational Psychology* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Form of Manuscript. Accepted manuscripts should be prepared on high quality bond paper with wide margins, using double spacing throughout. At least two copies should be submitted; each copy must include all figures and tables. Each page of the manuscript should be numbered. The first page contains the article title, author's name, affiliation and address to which correspondence should be sent. Authors should not place their names on the manuscript itself. The second page should contain an abstract of not more than 150 words.

Authors are requested to follow the instructions given by the American Psychological Association *Publication Manual* (1974).

Abbreviations and Symbols. Do not use final periods with units of measure that are abbreviated (cm, sec, kg, etc.) in text or in tables, except for "in." (inch). Underline letters that represent mathematical symbols; these will be set in italic type. Unusual symbols should be identified in pencil in the margin the first time they appear.

Figures and Tables. All illustrations are to be considered as figures, and each graph or drawing should be numbered in sequence with Arabic numerals. Each figure should have a descriptive legend, and these should be listed on a separate sheet of paper. Figures should be planned to fit the proportions of the printed page ($4\frac{1}{2} \times 6\frac{3}{4}$ in.), and care should be taken that lettering on the original is large enough to be legible after a reduction of 50–60%.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text and placed at the end of the manuscript. All tables should have descriptive headings, typed double-spaced, above the table. Footnotes in the text should be identified by superscript numbers and listed consecutively on a separate page.

References. Literature references in the text should be cited by the author's surname and the year of publication, e.g., Roe (1960); Roe et al. (1961); Roe and Jones (1963, p. 150) (for reference to a specific page). If a reference has more than two authors, the citation includes the surnames of all authors at the first mention, but later citations of the same reference includes only the surname of the first author and the abbreviation "et al." Suffixes a, b, etc., should be used following the date to distinguish two or more works by the same author(s) in the same year, e.g., (Roe, 1960a, 1960b). Literature citations in the bibliography should be arranged alphabetically according to the surname of the author. Journal titles should be written out in full rather than abbreviated. Please note the style of capitalization and punctuation for journal articles, books, and edited books in the following examples:

Betz, E. L. An investigation of job satisfactions as a moderator variable in predicting job success. *Journal of Vocational Behavior*, 1971, **1**, 105–122.

Tucker, I. *The psychology of adjustment*. New York: Academic Press, 1970.

Cautela, J. R., & Wisocki, R. A. The use of male and female therapists in the treatment of homosexual behavior. In R. D. Rubin & C. M. Franks (Eds.), *Advances in behavior therapy*. New York: Academic Press, 1968. Pp. 165–174.

Proofs and Reprints. Galleys proofs will be sent to the author with reprint order forms. Authors will be charged for alterations in excess of 10% of the cost of composition. Authors may order reprints using the order forms provided.
